

IN THE SPECIFICATION:

Please amend the Specification as follows.

On page 20, paragraph [0074]:

[0074] An estimated value G_{air_Pb} of an amount of drawn air of the cylinder, based on intake manifold pressure, has precise information on a change in an amount of drawn air of the cylinder. Accordingly, a change ΔG_b in an amount of gas filling the intake manifold is adaptively calculated in such a way that a change in a final estimated value G_{cyl_hat} of an amount of drawn air of the cylinder, is made to coincide with a change in an estimated value G_{air_Pb} of an amount of drawn air of the cylinder, based on intake manifold pressure.
